Open Access Resources – An Insight	64
<i>Ms. Deepa Vinod & Ms. Navneet Sandhu</i>	
WordPress As A User-Friendly Content Management System	72
<i>Dr. Latha Venkataraman</i>	
Glimpses of Seminar	81

PREFACE

"Technology can become the "wings" that will allow the educational world to fly farther and faster than ever before—if we will allow it." - Jenny Arledge

Technological advances have impacted almost every aspect of life today & education is no exception. We have students looking to laptops, tabs or smart phones instead of books. Access to education has expanded; today we have massive amounts of information in form of books, audio, images, and videos available at ones fingertips thru internet. Knowledge is being imparted not only in so called 4 walls of classrooms, but also online through Khan Academy, MOOCS, podcasts & more. Traditionally classrooms were isolated and collaboration was limited to other students in the same classroom or building. But today we have video conferencing, Skype sessions to interact with people at different places. **Students use technology based tools such as wikis & Google docs.**

Library is said to be the heart of the institution. Thus to support teaching and research, libraries have to evolve, adapt, reinvent accordingly.

Libraries need to deal with increased competition of rising user expectations due to digitization & interconnectivity. It is challenging for libraries & library sci. professionals to adapt to these trends & technologies in satisfying the user demands. Library role is not limited to providing content & Research services, but also learning services & space facilities.

Anna Sabramowicz said *"Learners in the internet age don't need more information. They need to know how to efficiently use the massive amount of information available at their fingertips – to determine what's credible, what's relevant, and when its useful to reference."*

Nowadays library provides learning services like digital literacy, active learning, student engagement, encourage space facilities like innovation hubs & Makerspaces, quiet study places, leisure & relaxation & providing Research services like Digital scholarship, Data Management, Data Analytics, copyright compliance.

Seminar on Integrating **library system & services for quality education** aims to discuss these new technologies which have redefined & reshaped library & library professionals which will help students getting quality education.

Heidi-Hayes Jacobs – recognized education leader said *"Teachers need to integrate technology seamlessly into the curriculum instead of viewing it as an add-on, an afterthought, or an event."*
